

loop.

Your network is your best deal.

A trust-layered social network for smarter travel — using cards, cabinets, and connections you already have.

You have a network. You're not using it.

Three problems everyone faces — but no one has solved together.

CARDS

Card Benefits Wasted

Your friend-of-friend has an HDFC Infinia with 15% off — but you can't find them. You pay full price.

CAB

Airport Cab Tax

A solo cab from Bangalore to the airport costs ₹1,200+. But 2 people from your area are flying the same day — you just don't know.

TRAVEL

Blind Travel Decisions

You book a trip to London, pay for a visa service, spend hours researching — when your friend's friend went last month and knows everything.

The trust gap between strangers and friends.

Current Reality

- ✗ Credit card borrowing happens on WhatsApp — chaotically
- ✗ Cab sharing is random — OLA pool with strangers
- ✗ Travel tips live in scattered group chats
- ✗ No structured way to leverage 2nd-degree trust
- ✗ All these behaviors already exist — just unproductised

The Opportunity

- ✓ People trust friends-of-friends for transactions
- ✓ The social graph exists — it just needs a product layer
- ✓ Each use case reinforces the same network
- ✓ Network density = defensible moat
- ✓ India's urban middle class: 80M+ potential users

loop.

A private, trust-layered network where 2nd-degree proximity is enough to transact — not just connect.

The core loop

Personal Utility

Card optimizer that works on day one — zero friends needed.

Network Intelligence

Friend's cards, tips, and travel history enrich every search.

2nd Degree Trust

Not strangers. Not just friends. The sweet spot in between.

Five screens. One network flywheel.

-
- ```
graph TD; 1[1 Onboard] --> 2[2 Search]; 2 --> 3[3 Network]; 3 --> 5[5 Profile]; 5 --> 4[4 Book]; 4 --> 1;
```
- 1 Onboard**  
Select cards you own (name only — no financial data). Builds your personal deal engine instantly.
  - 2 Search**  
Enter destination. App shows best deals via your cards AND your network's cards side by side.
  - 3 Network**  
Add friends via phone. See their cards, travel history, countries visited — your extended intel.

- 4 Book**

Post-booking: cab sharing prompts, visa intel, and friend travel tips surface automatically.

- 5 Profile**

Log upcoming trips & past destinations. Becomes the data that powers others' searches.

# The graph is the product. Features are just entry points.

- 1st degree friends
- 2nd degree (friends of friends)

## Why the graph compounds

5 friends added →

25 friend-of-friends instantly unlocked

Each new card shared →

everyone in the graph benefits

Each trip logged →

becomes travel intel for the network

Each booking →

triggers cab sharing & visa prompts

*More users = more cards = more deals = more users*

# One network. Ten problems solved.

*All validated by existing WhatsApp group behaviour — we're productising what already happens.*

## Card Borrowing

Borrow a friend's card benefit for a booking — they get points, you get the discount.

## Cab Sharing

Split airport cabs with 2nd-degree contacts flying the same day.

## Travel Intel

Get real visa tips, itineraries, and money-saving advice from people who just went.

## Trusted Help

Find domestic help, maids, and cooks referred by someone in your network.

## Bulk Buying

Split wholesale orders — organic ghee, electronics — with neighbours in your graph.

## Item Lending

Borrow a DSLR or drill from a friend-of-friend for a weekend.

## Flatmate Finding

Find roommates who are vetted by someone you know, not random strangers.

## Doctor Referrals

Get specialists recommended by people who actually went, not anonymous reviews.

## Job Intros

Warm intros to companies through a trusted mutual — not a cold LinkedIn message.

## Friend Matching

Curated introductions between compatible friends-of-friends. Dating, done right.

# Build the graph. Then unlock everything.

# The behaviours already exist. The product doesn't.

80M+

Urban middle-class Indians  
travelling domestically yearly

12M+

Premium credit cards issued  
in India (and growing 35% YoY)

₹4,200Cr

Lost annually in unused  
credit card reward points

WhatsApp

Already the platform people  
use for all of this — chaotically

## Why now

- ✦ UPI normalised digital payments — trust in app-mediated transactions is high
- ✦ Post-COVID travel boom: India's domestic air passengers hit all-time highs in 2025
- ✦ Credit card reward economy is maturing — users are more sophisticated than ever
- ✦ No competitor has combined the utility layer with the trust graph

# No one owns the trusted-network transaction layer.

|                           | loop. | MakeMyTrip | BlaBlaCar | LinkedIn | CRED |
|---------------------------|-------|------------|-----------|----------|------|
| Card deal optimization    | ✓     | Partial    | ✗         | ✗        | ✓    |

| Cab sharing via network   | ✓     | ✗          | ✓         | ✗        | ✗    |
| 2nd-degree trust layer    | ✓     | ✗          | ✗         | Partial  | ✗    |
| Travel intel from friends | ✓     | ✗          | ✗         | Partial  | ✗    |
| Works at zero friends     | ✓     | ✓          | ✗         | ✗        | ✓    |

# The graph unlocks a platform, not just an app.

## Near-term (6-12 months)

ALERTS

### Smart Notifications

Alert when a friend-of-friend is traveling your route or has a relevant card deal

TRIPS

### Trip Planning Mode

Full itinerary builder powered by network travel history and crowdsourced tips

CHAT

### In-App Messaging

Contextual chat — ask about visa, split a bill, coordinate cab — all in one thread

## Medium-term (1-2 years)

HOME

### Trusted Services

Domestic help, plumbers, electricians — all referred through verified 2nd-degree network

SHOP

### Group Commerce

Bulk purchases and group buying coordinated via your trusted graph

ASK

### Knowledge Graph

Ask your network anything: 'Who knows a good CA in Pune?' — structured answers

## Long-term (2+ years)

MATCH

### Social Matching

Curated introductions — friendship, dating, co-founding — within the trusted graph

FINTECH

### Financial Layer

Credit scoring, micro-lending, insurance — all powered by network trust signals

API

### Open Graph API

Let third-party apps query the trust graph — becomes infrastructure, not just an app

# "The trusted layer between people and their transactions."

Not another super app.

A graph that makes every transaction in your life

10× more trusted, 10× more efficient.
